Neko
Legends

Overview

This package serves as a combat enhancement for the '[Nagisa- 3D Model](#)' (sold separately), offering a diverse range of animations and visual effects.

Tested on **Unity 2021.3.32f1** and **Unity 2022.3.14f1**.

The following assets are required to run properly as shown in the video demo. Please install them in the correct order:

- 1) [Shared Demo Assets](#) (Free package, required for demo scene to run)
- 2) [Neko Legends - Nagisa - 3D Model](#) (base 3D model sold separately). The Nagisa package already comes included with [Neko Legends - Cel Shader URP](#) (Not required to purchase).

This package also comes bundled with the [Water Magic Shader URP](#) for free. Additional scripts are available for extra special effects for the Water Magic Shader.

Features

- I. [MagicaCloth2](#) is additional bone and cloth physics scenes which are available for users who have already bought and imported those assets properly in order to use it.
- II. The demo scene comes with controller code to guide you through character features.
